

How to blow up a balloon with science!

You need:

1. a balloon

2. dry ice (solid carbon dioxide)

What to do:

- Put some dry ice into the balloon **be careful this is -78°C** get a grown up to do this bit
- Tie the balloon
- Watch and wait.

As the dry ice warms it turns back into carbon dioxide gas and blows up the balloon as the gas takes up more space than the solid
